

Brant Simmons – General Manager – Services Technologies, GE Aviation

After working at McDonnell Douglas as a co-op, Brant graduated from the University of Tennessee in 1991. Brant then joined GE Aviation that same year on the Edison Engineering Development Program. Brant has held a number of technical, process improvement and system integration roles. After completing the EEDP program, Brant developed technical depth in rotating parts lifing, CF6 systems integration, and engineering process improvement. Brant currently works as the engineering leader for the Services Technology team, which develops and applies new technology for our customer's in-service engines.
